BGP-40 mm

Grenade launcher

Underbarrel grenade launcher is intended for neutralization of enemy's live force, firearms and unarmoured vehicles: 50 to 350 m direct fire (bottom part of angles on sighting device), 200 to 300 m indirect fire (bottom part of angles on sighting device).

Underbarrel grenade launcher can accept the following ammunition: HE grenades, HEAT grenades, incendiary, smoke, practice. The design prevents firing from underbarrel grenade launcher when it is not on the rifle, although it functions as a system that is separate from the rifle. The interior of the barrel is chrome plated. Rubber buffer is set to the rifle to reduce the blow during firing. In direct firing, aiming is done through iron sights (front and rear). In indirect aiming, the shooter uses plummet. Underbarrel grenade launcher is carried in its holster or on a combat vest (when stripped). The complete set of the gun includes a carrying bag for 10 grenades. At customer's request, underbarrel grenade launcher can be adapted to fit the rifles of other manufacturers.
